Get an Overview of the Features That Will Be Implemented in the Training

Explanation	Screenshot
ⓘ In this exercise, you will get an overview of all the features you will work with in this training. You will first work in ADT and add the ABAP CDS annotations there. After that you will create an SAP Fiori elements app in SAP Business Application Studio where you will continue with the rest of the exercises. You will use SAP Fiori tools to add all of the features there and finally to deploy the app to your trial account on SAP BTP.	ⓘ You can see the app preview in your browser. The preview has been launched from ADT. For now, you cannot see any table columns. This is the initial state of the app. In each exercise you will add a new feature to it.	
Explanation	Screenshot
You will create a metadata extension for the consumption view of the *travel* entity where you can put UI relevant annotations.	You will insert the corresponding ABAP CDS annotations to add table columns.	You will add the corresponding ABAP CDS annotations to visualize *Travel ID*, *Agency ID*, and *Customer ID* as filter bar fields.	
Explanation	Screenshot
You will add the criticality icons and criticality color to the *Overall Status* values.	You will hide the codes and display the corresponding texts for the *Overall Status* values.	You will add the travel description and the travel ID to the object page header.	

Explanation	Screenshot
You will add two fields as data points to the object page header.	You will add a new section called *General Information* and the identification subsection called *General* to the object page body.	You will add *Prices* and *Dates* subsections to the *General Information* section.	
Explanation	Screenshot
You will generate an SAP Fiori elements app in SAP Business Application Studio and will continue with the rest of the exercises there using SAP Fiori tools to configure all the features.	You will configure the flexible column layout.	You will enable the initial load of the table data. It means that the table data is automatically loaded, you won't have to load the data manually by clicking *Go* on the table.	
Explanation	Screenshot
You will edit the table columns of the list report by removing, moving, and adding columns.	You will add a new section to the object page containing a *Bookings* table.	You will configure the navigation to the subobject page.	
Explanation	Screenshot
You will add the most prominent information to the header of the subobject page.	You will add a section to the subobject page body.	You will add a custom section containing a geo map to the object page body.	
Explanation	Screenshot
You will add an information message to the custom section.	You will deploy the app to your trial account on SAP BTP.	You will display the deployed app from your trial SAP BTP account.	Explanation	Screenshot
ⓘ You have got an overview of all the features which will be added step by step in this training. This concludes the interactive tutorial.
